

## INTRODUCTION

Solon Manufacturing Company has established, documented, implemented and maintains a quality management system to continually improve the effectiveness of its processes and to better satisfy the needs of its customers. The quality system complies with the ISO 9001:2008 standard.

The manual is divided into 5 sections corresponding to the main quality system requirements of the ISO 9001-2008 standard. Each section starts with a General Policy statement expressing the commitment to implement the basic principles of the quality system requirement that is the subject of the section. The General Policy statement is followed by more specific Procedural Policies outlining how the General Policy should be carried out and referencing the relevant level II procedures.

The purpose of this manual is to: define and describe the scope of the quality management system, to define the authorities and responsibilities of the management personnel affected by the system, provide a description of the interaction between the processes of the quality management system and to provide general procedures for all activities comprising the quality system.

Another purpose of this manual is to present our quality system to our customers and to inform them what specific controls are implemented to assure process consistency and process and product quality.

## SCOPE of SOLON MANUFACTURING COMPANY Quality Management System

The design and manufacture of Belleville springs, flange washers, disc springs, pressure switches, density switches and other industrial control products for industrial markets including energy and oil and gas.
