

SOLON® SANITARY CONNECTION PRESSURE SWITCH REDUCES CONTAMINATION RISK FOR FOOD & BEVERAGE INDUSTRY

INDUSTRY CHALLENGES

- Contamination risk
- Expensive seals
- Pressure measurement inaccuracies

SOLUTION

Solon's *2SAN Sanitary Connection Pressure Switch*.

Pressure and vacuum switches employ a PTFE protected diaphragm and have a 2" Tri-clamp fitting. The diaphragm is mechanically connected to the switch mechanism so there is no risk of fill-fluid affecting performance or contaminating the system. Designed specifically for food, dairy and other sanitary applications, the 2SAN Sanitary Connection pressure switch eliminates the need for fill-fluid, which also reduces the effect temperature has setpoints.

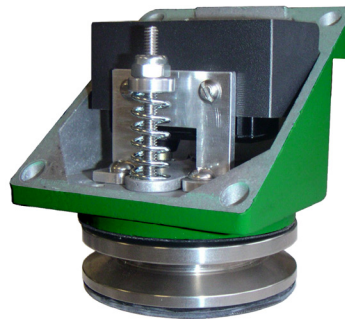

Range is 2-300 psi (other fitting sizes and/or ranges, including vacuum are also available).

SOLON ADVANTAGES

- Customized, engineered solutions
- Made in the USA

CUSTOMER BENEFITS

- Increased pressure measurement accuracies
- Low contamination risk
- Economical

*Solon Sanitary Connection
Pressure Switch*
